The Village Health and Rehab	ADT, CCD
Big Sky Diagnostic Imaging	ADT, Radiology Results, Image Exchange

Traditional HIE Framework

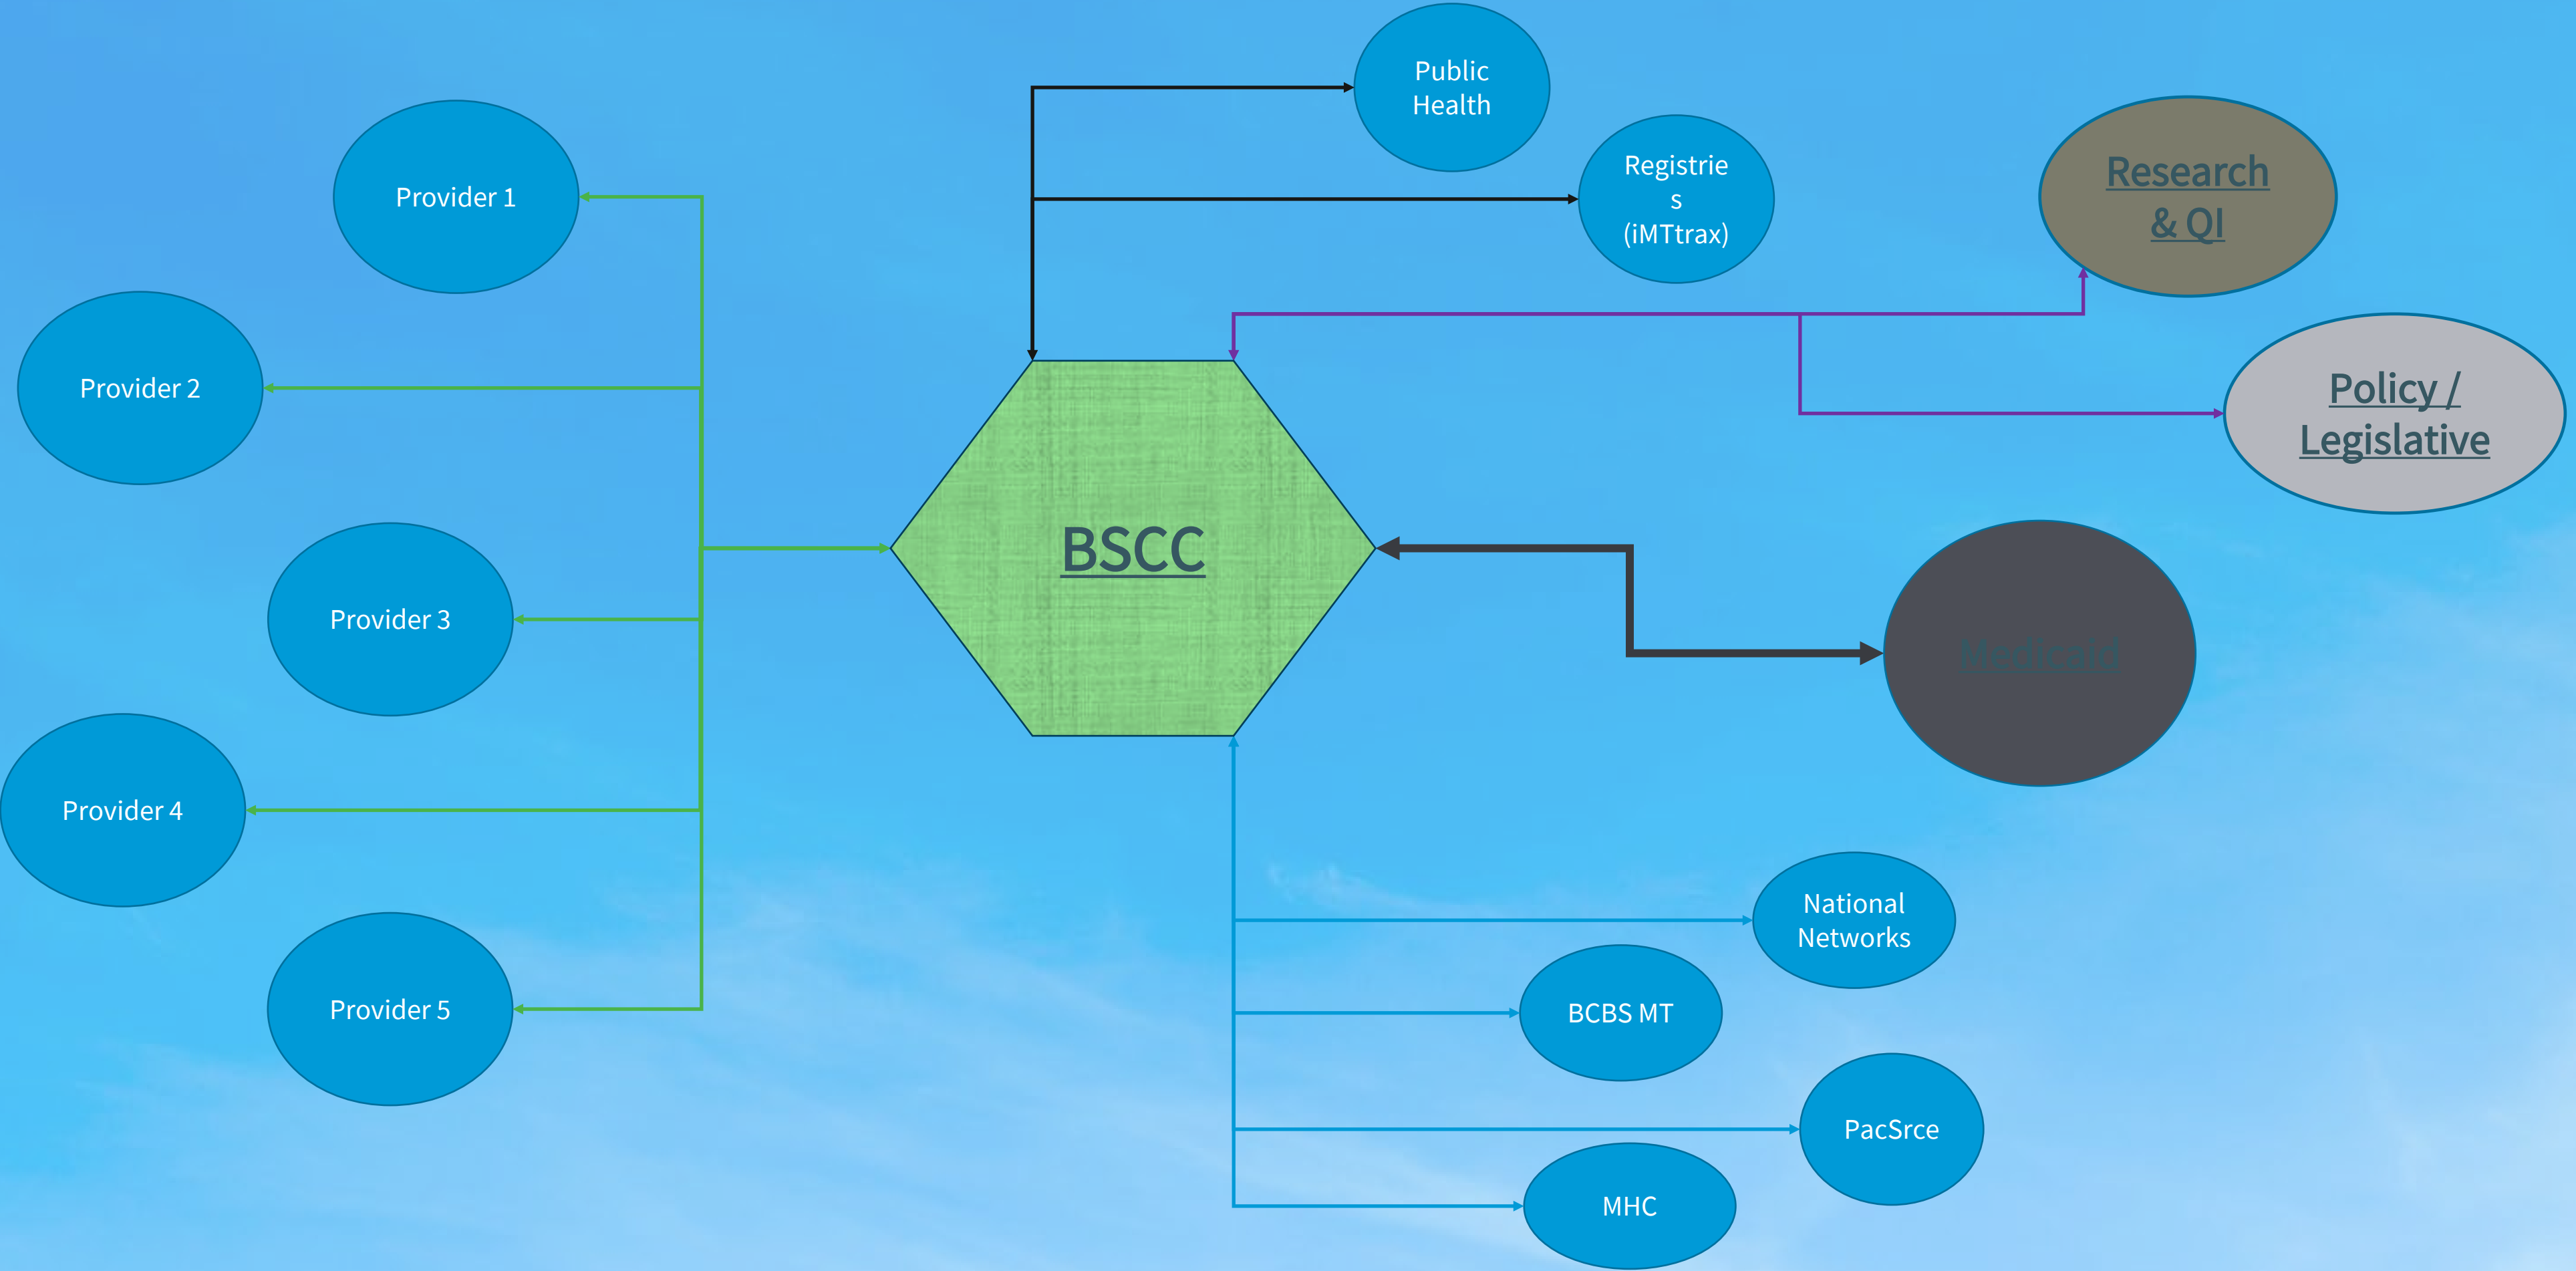

- Facilitate access to clinical data for specific Treatment / Payment / Operations use cases for participating health care organizations (build a better fax machine)
- Support enhance care coordination between provider organizations
- Facilitate care coordination with participating payer organizations
- May provide data reporting for public health use cases

- Broad-based organizational governance model with multi-stakeholder, cross-sector engagement
 - Includes community, state government, tribal, provider, patient etc.
- Infrastructure to advance data sharing, aggregation and integration of multiple data sets
 - Build infrastructure that allows for data sharing beyond traditional HIPAA consent construct to support public health, research etc.
- Collaborates with various data networks
 - Provide augmented data capabilities to not just “share” existing data, but enhance data quality through aggregation and integration/terminology services
- Neutral transparent approach to data use and service engagements
 - Not tied to any one sector or stakeholder

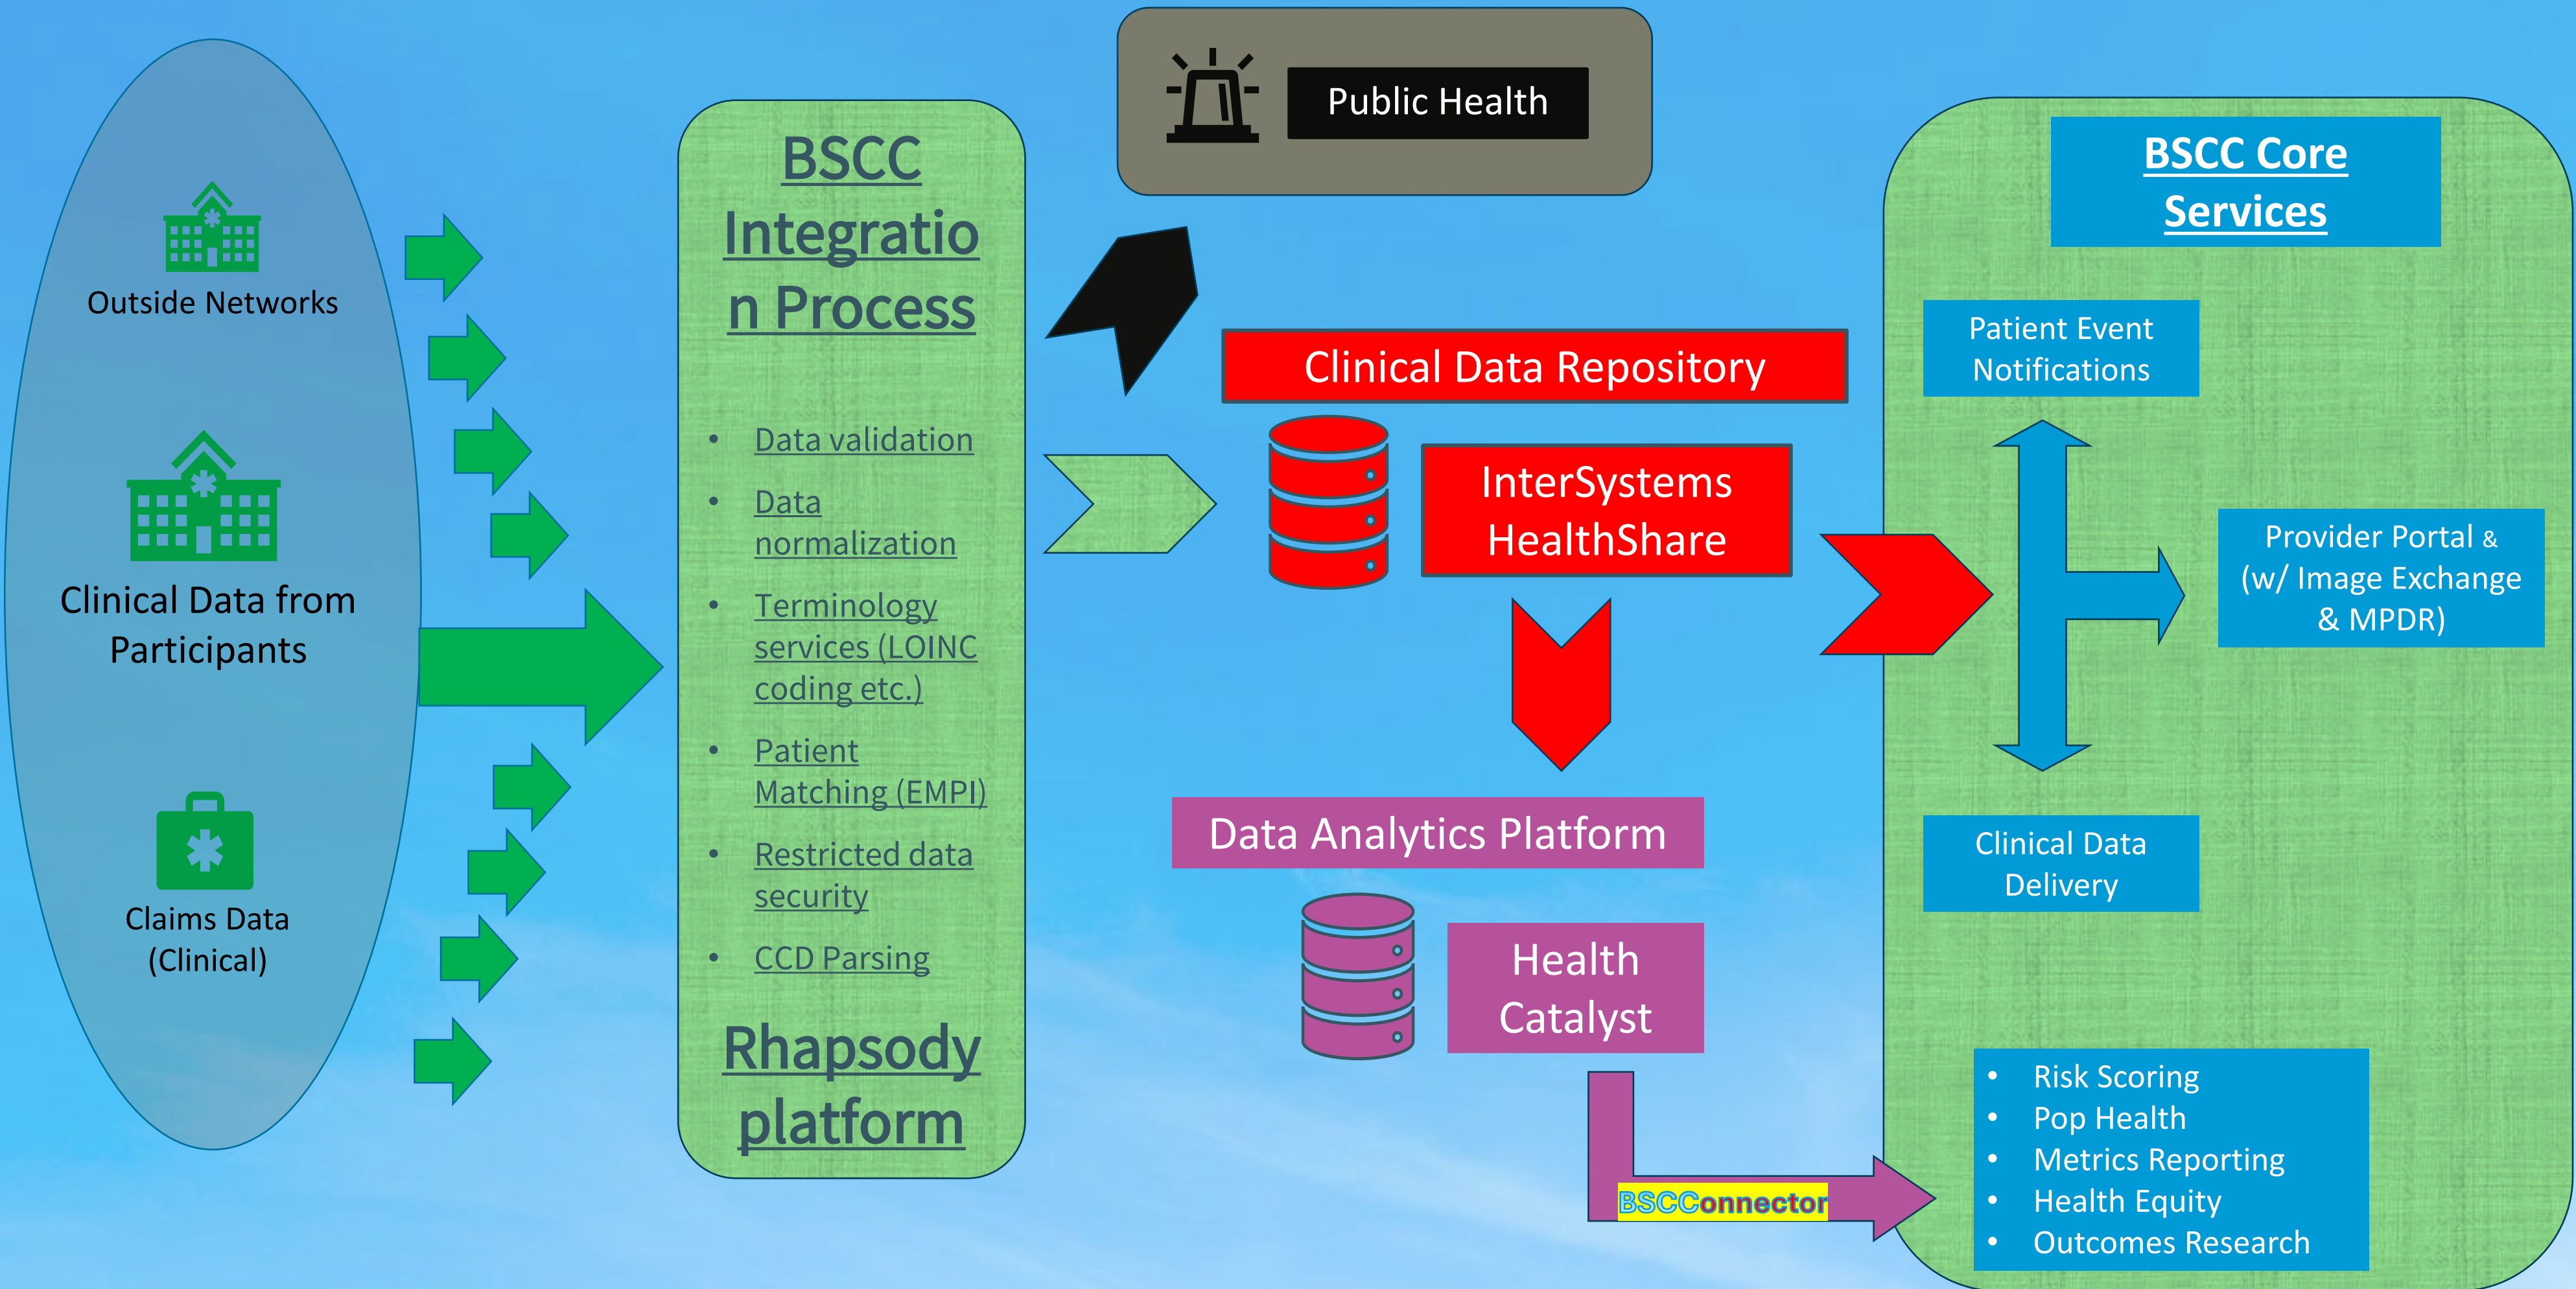

Expanded Interoperability Gets Complex

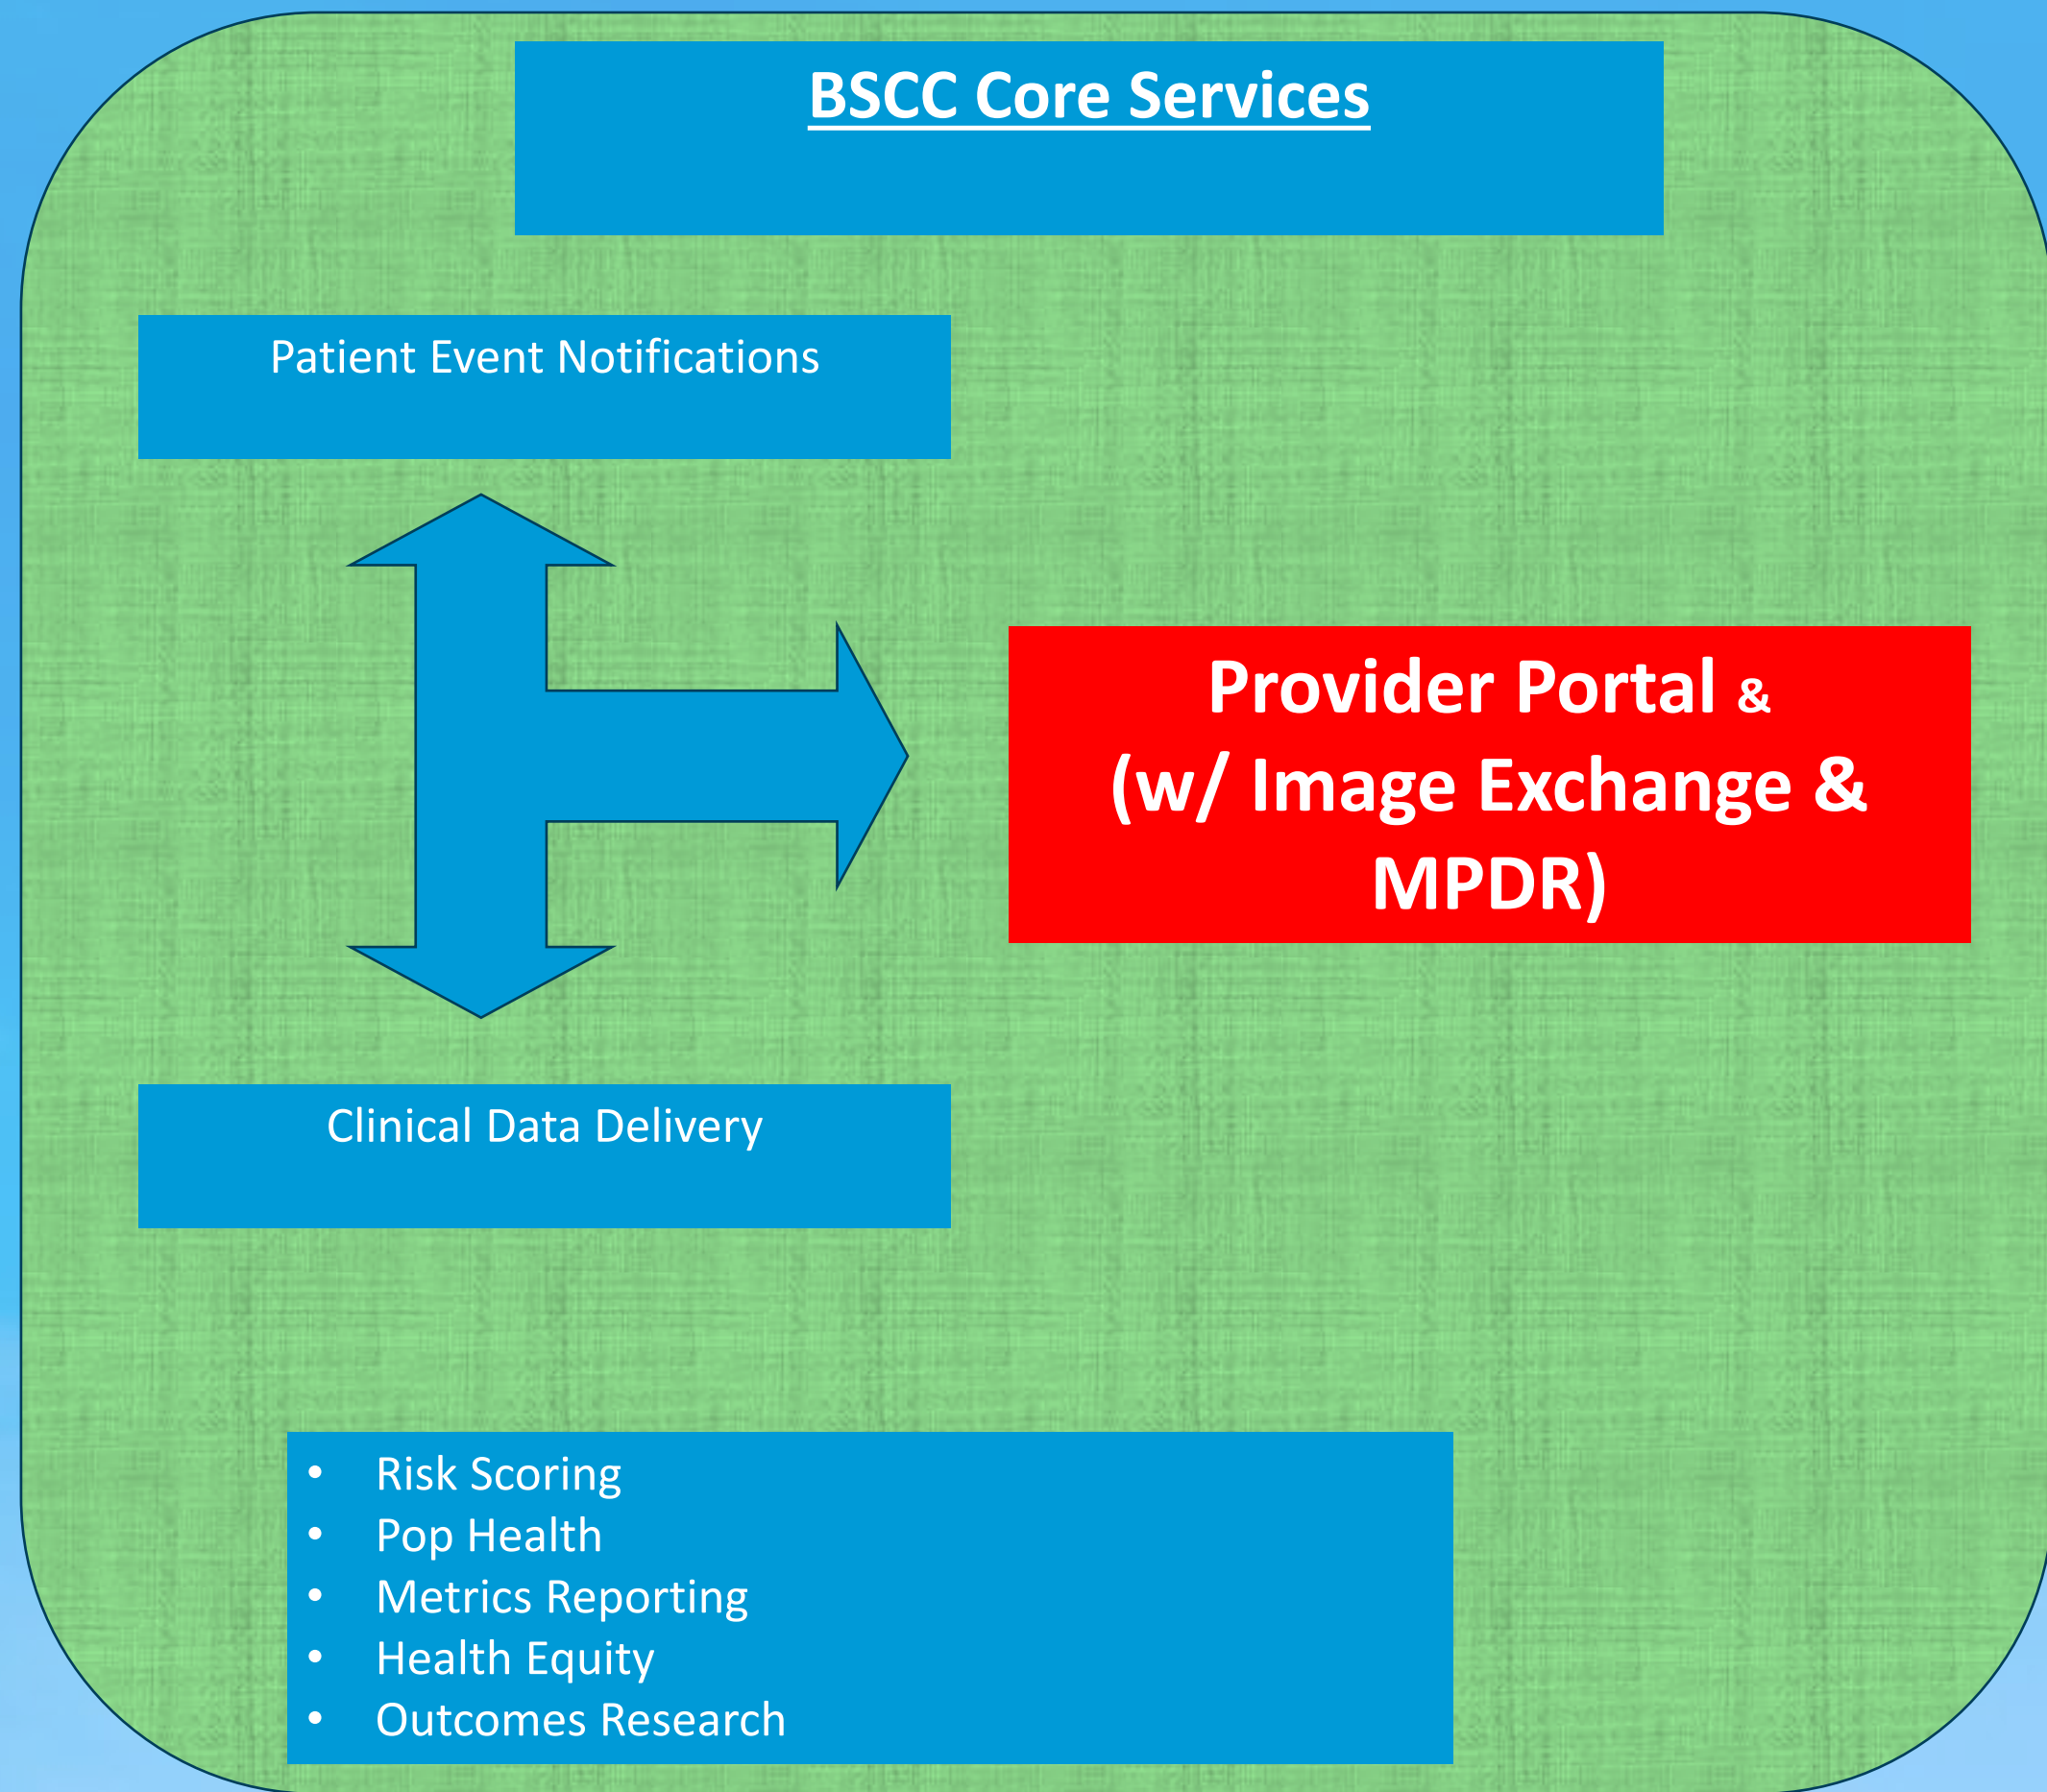

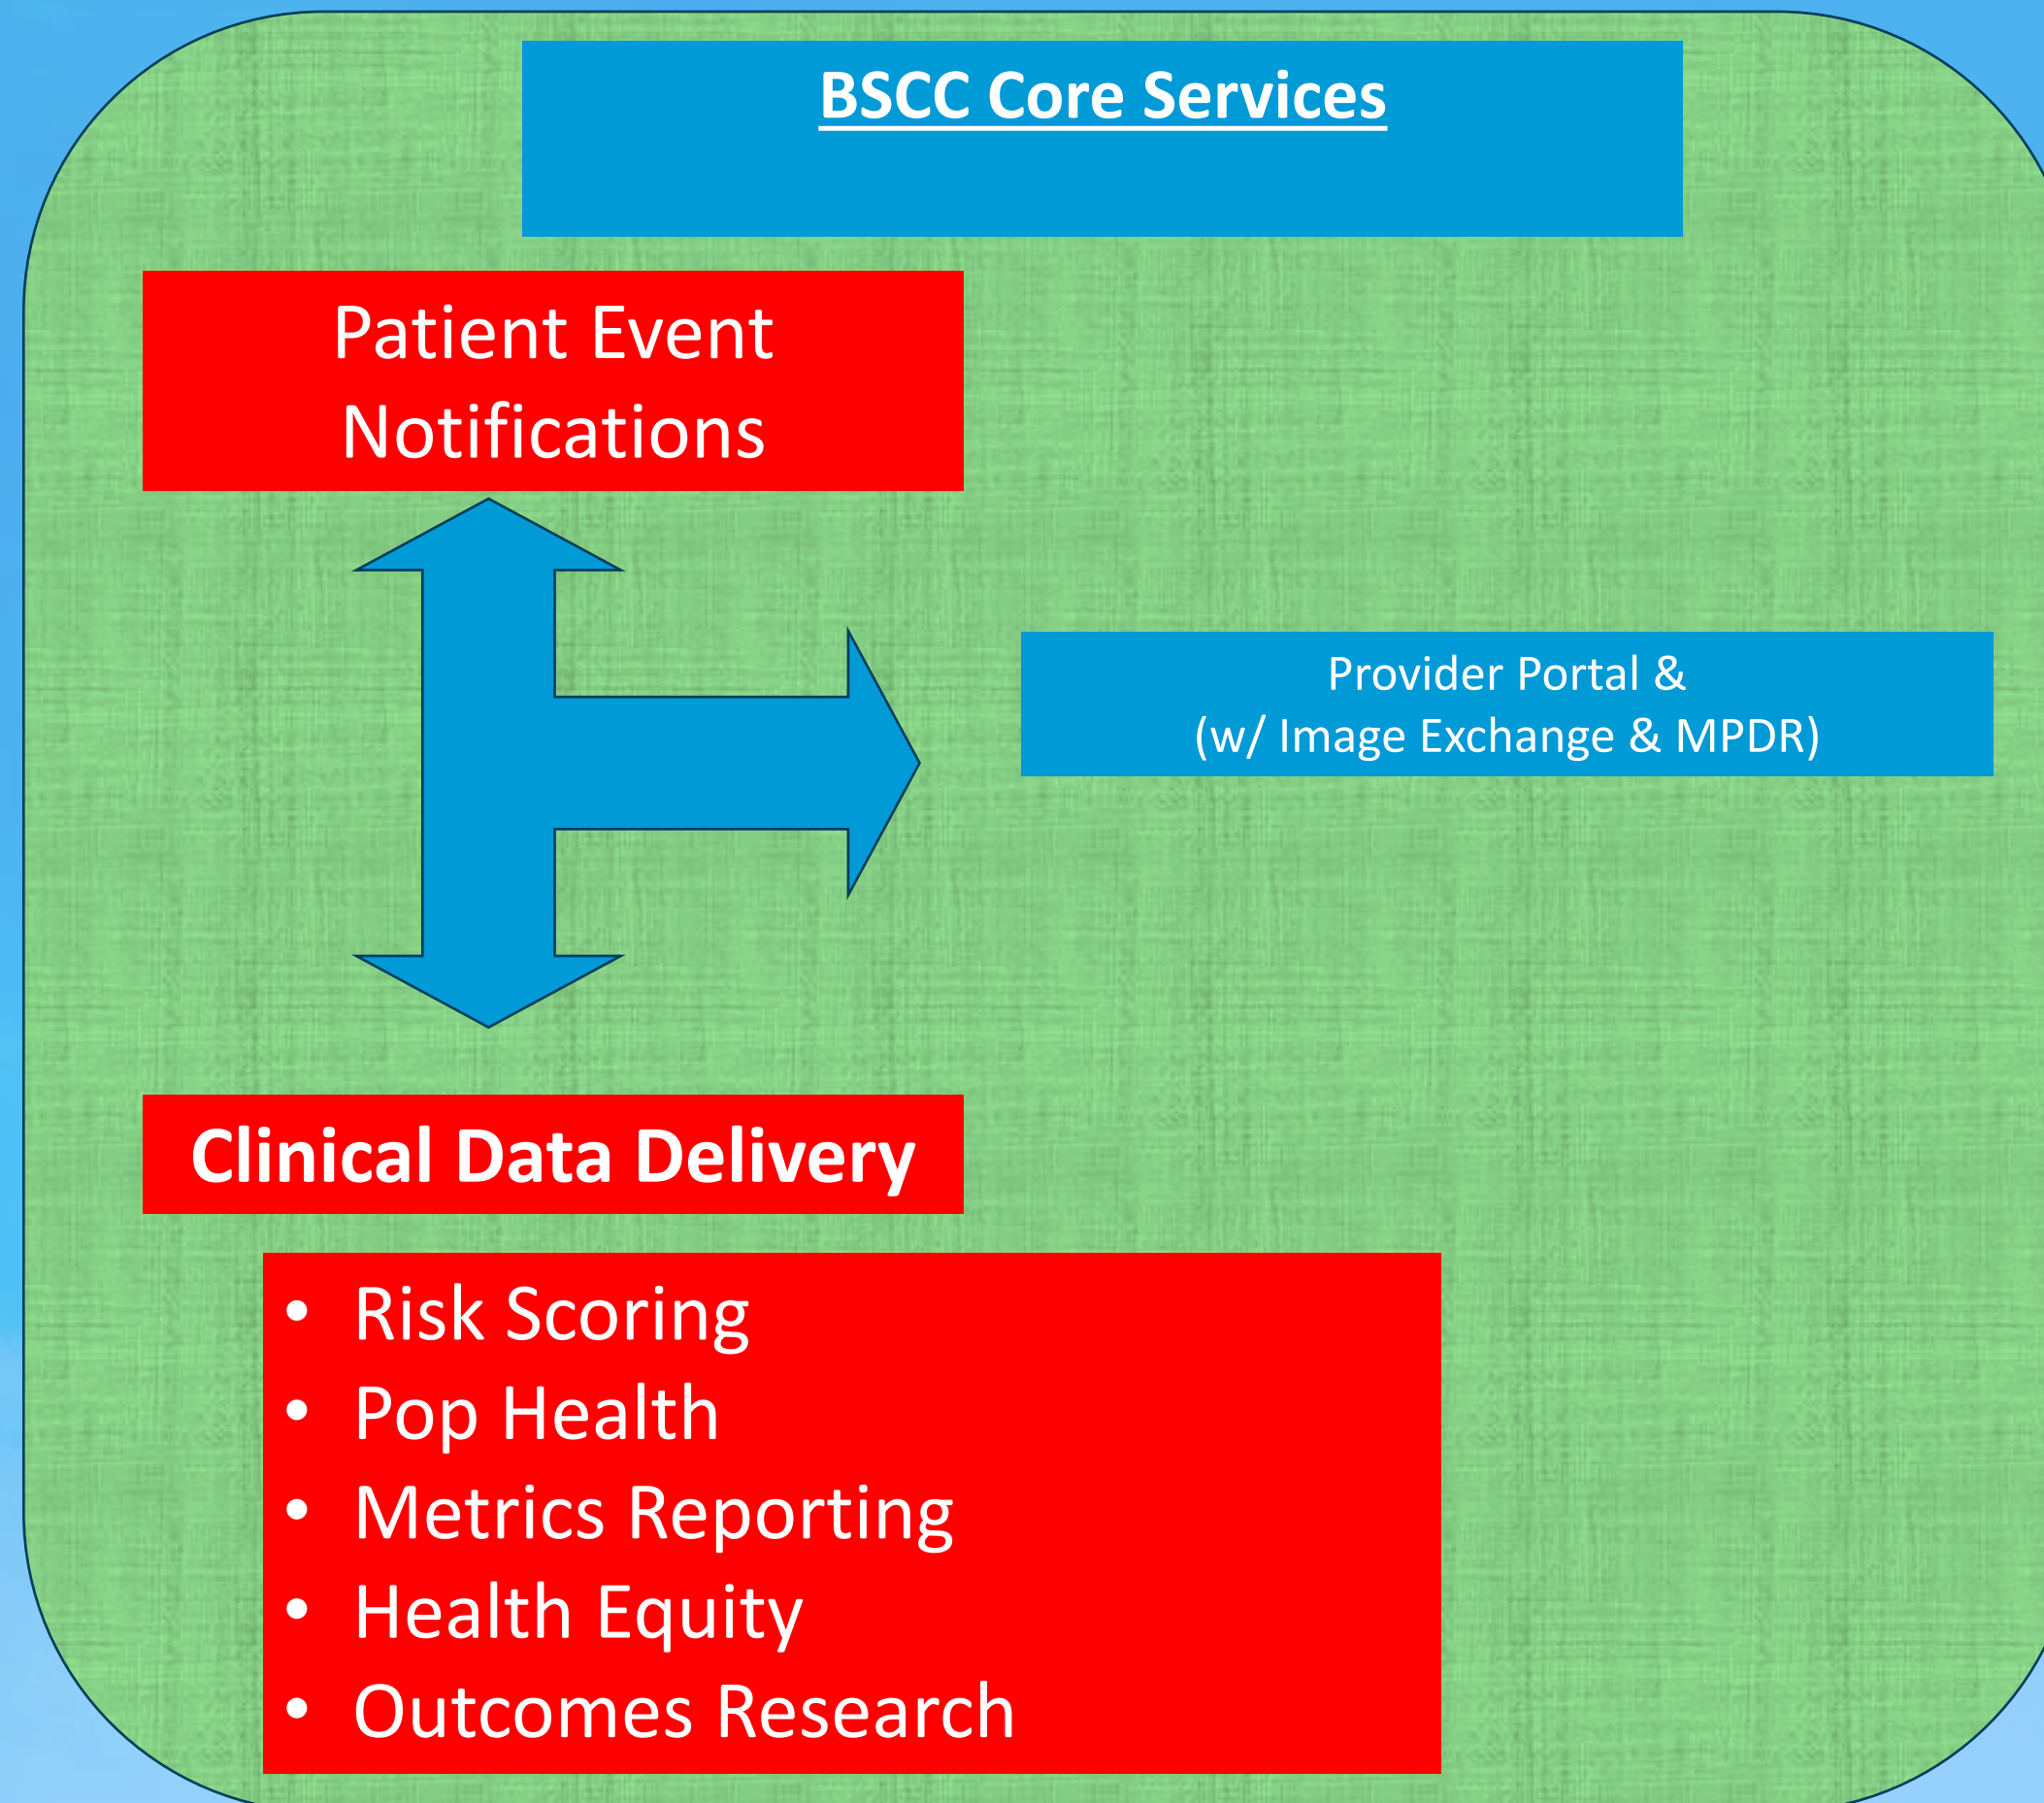

Centralized Data/Service Delivery

BSCC Platform and Technology

2023/2024

- Grow Clinical Data Repository and Master Patient Index
- Provider Workflow Integrations
- Grow Employees vs. Contracted Staff
- Greater Control of our Infrastructure
- Data Quality
- Data Analytics Services
- Public Registries connectivity (MPDR / imMTrax)
